Cheeks Chan

July 23, 2014 March 9, 2015 Momo

by Takara Tomy

The Cheeks Chan was released in Japan around 2013/2014 and is a very special virtual pet. You don't have to clean up heaps, it doesn't grow, and you don't have to feed it. Actually boring, isn't it? No. Because the special thing about it: It's a small bakery :3

If you love sweets and baked goods, you'll also love Cheeks Chan! The aim is to bake as much as possible and learn new recipes, attract customers and "collect" them, and finance the interior design by selling the baked goods. But the most interesting feature, in my opinion, is the connection to PC and Android/iOS devices. You can read exactly how this works below; 3

Start

You need three AAA batteries. After insertion, press the reset button once to be on the safe side and you're ready to go. Music plays and the Hoppe Chan, your little baker, appears on the screen. Otherwise you don't have to do anything else to start, neither set the time nor date. It's easy ;) The Hoppe Chan lives very spartanly, in a room that can be completely redesigned. At the bottom of the screen, you'll see two rows of dots. The upper points are your shop points (you get them by selling baked goods), the lower ones are your games points (you get them by winning the mini-games). To the left and right of the screen you have the A and B buttons. The C button is in the middle of the loop. With A you click through the main menu (which consists of 2 rows with 4 symbols each), with B you confirm, and with C you cancel.

Mixing bowl

Here you will find all the treats that your Hoppe Chan can prepare. This costs shop points. How many points you have is conveniently displayed directly when selecting the menu. Once you have chosen what you want to prepare with B, you will be shown how much it costs. Press B 2x and a sugar-sweet animation follows^^ At the beginning you can't prepare much, but gradually you can learn up to 55 treats. To scroll through the recipes, you have to hold down A.

Piping bag

Here you can use your shop points to learn new "recipes" with luck. Either you invest 50 or 120 points. With the latter, the probability of learning something new is greater.

Album

The album shows all customers who have previously shopped at Hoppe Chan or who have been unlocked by connecting to PC or Android/iOS devices. Press and hold A again to scroll through the album. In total, you can unlock 150 customers, and each of them looks ^_^ uniquely cute

Connect

A simple menu consisting of two items: Connect to PC/App, or send gifts to another Cheeks Chan. To connect to the PC, all you have to do is open the website in a Flash-capable browser. There you can invite new customers to Cheeks Chan and play mini-games to win game points or items. The items include wallpapers, tables and decorative accessories. The app offers the same scope as the browser game, but you need a Japanese iTunes account to download the app, or you have to fool your Android devices into believing that you are in Japan (you can find out how to get the app on your device via Google Search). To connect the Cheeks Chan to the respective devices, all you have to do is hold it up to the screen when prompted and confirm by pressing B. This is followed by a sweet animation.

Games

When you start Cheeks Chan for the first time, you only have two out of five games to choose from. You unlock the remaining games by filling your ***album***. How many customers you have to collect is shown in the respective games.

- The first game is actually not even a game, because it is pure coincidence whether you win or not.

- In the second one, you have to place icing on the empty positions at the right moment. And please don't catch the Hoppe Chans ^^

- In the third, you always have to stack three Hoppe Chans of the same color on top of each other. With A you move to the left, with B to the right.

- The fourth game is again based on the principle of randomness and is a shell game. Hoppe Chan plops into a cup of milk, which is swapped with two other cups, and you have to guess which of the three cups the Hoppe Chan is in.

- Game Five is a slot game. You have to get three of the same symbols.

Shop/ Inventory

The menu consists of two items. On the left, the shop. On the right, your inventory.

Shop: With your shop points, which you receive by selling your goods, you can buy new wallpapers, tables and accessories here. The interior design not only has a visual aspect, but also influences how many shop points you receive from customers.

Inventory: Everything you have bought or downloaded via PC/app can be found here. From top to bottom: wallpapers, tables, accessories for the right side, accessories for the left side.

School

Send your Hoppe Chan to school to learn new recipes. Once again, it seems to be a coincidence whether and what is learned. The length of time your Hoppe Chan stays there may affect what it learns.

System

Top point: Set the sound.

Middle point: Select standby animation. This always appears shortly before the Cheeks Chan goes into standby mode.

Last point: here you can choose between two types of reset. Unfortunately, we don't yet know how they differ. As soon as we have new information, an update will follow.

Unfortunately, it is *not* possible to adjust contrast or brightness, as screen brightness is important to connect to other Cheeks Chans.
